Question. SOW paragraph C.4.4.4.1 prohibits the use of multi-frame processing, notably for the enhancement of temporal Signal-to-Noise Ratio and MRT performance. We presume other forms of multi-frame processing are allowed such as in paragraph C.4.3.4 for the application of scene-based spatial Nonuniformity Correction (NUC). Please clarify paragraph C.4.4.4.1 to state that multi-frame *averaging* shall not be used for the enhancement of MRT and temporal Signal-to-Noise performance.

Answer. Paragraph C.4.4.4.1 precludes the use of multi-frame averaging for the enhancement of MRT and signal-to-noise performance. It does not preclude the use of multi-frame processing for other purposes such as non-uniformity correction.
